Section 5. Terms of Reference

Background

Guinea is a coastal country situated in the West Africa, with total population of 13,132,792 (as of 2020). With the total land area of 245,857 km², the country has a diverse range of natural resources especially minerals and ores. Average temperature of Guinea ranges between 25°C to 32°C. Guinea is prone to extreme weather conditions such as tropical cyclones which gravely affects the economic activities.

Almost half of the total population of Guinea has access to electricity (42%), while remaining half of total population are living without energy access². The electricity production in the country is dominated by hydropower which accounts for 61% share in the total energy mix with a total of 1,484,414 MWh produced in 2020³. The installed capacity in Guinea for the year 2020 was reported to be 636 MW (in 2020)⁴, of which fossil fuel installed capacity was 254 MW (about 40%), majority achieved by hydropower with 368 MW (58%) of installed capacity.

The Government of Guinea has committed to meet the 9.7% target to reduce CO₂ emissions by 2030 as mentioned in the Nationally Determined Contributions (NDC), Guinea will prioritise the use of renewable energy to produce electricity. NDC targets 70% electricity access by 2025, and 80% by 2030⁵ by adding more hydropower stations along with renewable energy plants (solar PV and wind).

According to the government of Guinea's updated NDC⁶ submitted to the UNFCCC in July 2021, the country aims to target to reduce emissions by 9.7% by 2030. It also identifies strategic objectives related to increased use of solar PV in the promotion of "decentralized" solutions involving local communities and private sector at the rural level. This strategic objective also includes satisfaction of the needs of rural and peri-urban areas for the implementation of a program of access to energy services, in accordance with the objectives of the renewable energy policy (EREP) and the ECOWAS energy efficiency policy (EEEP).

ISA Programme No. 03 "Scaling Solar Mini Grids" was launched with an objective to cater to the energy needs of ISA member states in identified areas with unreliable or no grid(s), and in island member states having abundant potential to tap solar energy including replacing existing DG sets with solar technology.

In this context, ISA is looking for a competent firm / company to support Guinea move forward towards its stated objectives of universal countrywide electrification, by way of conducting survey & investigation of potential areas of Guinea for Solar Mini-grids and subsequently preparing bankable DPRs. The list of identified sites is attached as **Annexure I**.

Desired competencies of the bidder
